### **Pro Collision Converts to R-M Waterborne Automotive Refinish System**

March 1, 2011 – Lake Havasu City, Arizona – Pro Collision announced today that it is one of the first auto body repair shops in Lake Havasu City, Arizona to offer eco-friendly collision repair.

Pro Collision has made an environmentally-sound decision to convert its shop from a solventborne system to the R-M Onyx HD<sup>®</sup> waterborne refinish system by BASF – The Chemical Company. R-M's Onyx HD<sup>®</sup> waterborne paint system not only helps protect the environment, but also combines ease of use and durability with superb color matching. Pro Collision's goal is to protect the region's air, water, and soil by reducing hazardous waste and air pollution. "A more environmentally friendly repair or collision center today, a greener tomorrow," say owners Damon and Debbie Haugen.

BASF applauds Pro Collision's commitment to the environment. "We view Pro Collision as a true environmental leader in its industry," says Darlene Eilenberger, BASF Marketing Director, North America.
